Alberto Vilva

Web Developer

Designer turned developer. After some time growing as a front-end developer I decided it was time to learn how to build something entirely on my own. That's how I jumped into the adventure of building products and trying to make them profitable! Currently building Byte Vitae, aimed to be the tool to make the best looking resumes on the internet. Atleast if it's not profitable I have a way that does not suck to create my resume for my next job hunt :P
